I. SPAN OF

ATTENTION

Details of Psychological Experiment : 1.

Name : Nandini Chavan. Roll. no: 08.
Class : Sem 2 BEd. Experiment. no: 01.
Date :

Name of Experiment: Mental Work & Fatigue.

Aim of Experiment: To study effect of fatigue
Device : A letter printed in lined sheet.

Background of the

Experiment:-

All of us used this word, when our ability to do work, which we have been doing decreases.

when bulk output false, we say, "we are fatigue". The fatigue is because of lost of interest or motivation.

One must not be focused between psychological fatigue and mental fatigue.

Modern experimental psychology suggest that what is apparently fatigue is usually boredom.

Instructions for the

Experiment:-

Experimentor has given the following instructions to the subject, before doing the experiment.

- Now, I am going to distribute a paper with letters printed in lines to use.
- When I will say start, then you will have to start cancelling the letters. You will have to do this work for 30 sec.
- You will have to draw one vertical line / mark to indicate the work done in that figure.

Procedure

The experimenter has taken the actual experiment after giving the instructions to the subjects.

Experimenter has distributed the paper with letters printed in lines to the subjects and hold them to face it down.

The experimenter explained the procedure of the experiment.

When experimenter said the word start, then subject turn the sheet and started cancelling the letters (a, b, c, d).

At the end of 30-secs, experimenter told the subjects to mark vertical line to indicate the work done in that

WORK PROBLEM

INTROSPECTION

CONCLUSION.

INTRODUCTION

When the experiment start, i was energetic But, after some work period, i got confused by constantly reviewing the alphabets, & sometimes didn't cancelled.

During 1st to 3rd period it took $\sqrt{\quad}$ time to search the letters to cancel, the speed of cancelling was slow & also few $\sqrt{\quad}$ errors occurred.

The fatigue impact in the next, $\sqrt{\quad}$ "5th", 6th, 7th, But there was no error, in these period as speed was slow.

CONCLUSION

came across these
conclusion after this mental
work-fatigue experiment:-

Phenomenon of fatigue
natural for every indi-
vidual. It's a psychological
state of exhaustion.

Mental fatigue occurs due
to loss of interest.

Fatigue decreases the
efficiency accuracy of the
work.

Fatigue reduce capacity of
body as well as mind.

EDUCATIONAL

IMPORTANCE &

EDUCATIONAL

IMPLICATIONS.

Creation of interest in the subject among the students;

Teacher must teach the difficult subjects by making it ^{easy} through various activities to create their interest in teaching.

Example: In IT, would piece school, while teaching english, the Teacher gave very simple questions to the students.

EXPERIMENT

ON

LEARNING

CURVE

DETAILS OF PSYCHOLOGICAL EXPERIMENT: II.

Name : Ranjita Sahu Roll. no: 08.

Class : 2nd Sem. B.Ed.

Date :

Experiment No: 02

Name of the Experiment: Learning Curve

Aim of the Experiment : To study the process of learning with the help of learning curve.

Device:

① A letter digit substitution sheet.

② Stop watch.

Instructions for the Experiment:-

Experimenter has given the following instructions to the subjects before doing the experiment.

- ① Now, on going to distribute, letter digit substitute sheets to you.
- ② when i will say start, then you start to write, the assigned alphabet in front of each english digit.
- ③ when i'll say stop, stop your work.

INTROSPECTION

REALISM

CONCLUSION

CRITICISM

- When the experimenter pronounce the word start in the work period then it took time for me to co-relate the digits.
- In 2nd & 3rd i remembered the substitutes for alphabets.
- 5th, 6th, 7th i experienced the plateau stage.
- After 9th period, progress was fast.
- On 13th work period, I did the maximum substitutions, & decreased

If our mind can not concentrate then we can not achieve the effective goal.

CONCLUSION

I came to the following conclusion after this experiment:-

Slow progress period:- Increase or decrease is seen while learning new things in initial stages.

Fast progress period:-

After practice & being regular, growth is seen gradually in learning process.

Plateau stage:-

It is the improvement after fast progress the progress either gets stable or parallel.

Educational Importance

Educational

Implication

Evaluating the progress of students:-

Students should always learn various subjects and skills.

Education implication:-

ing of learning graph for improvement and decrease in studies of student.

Revision while taking new topic is pleature stage.

Assessment should be done after completion of the topic.

ONS IMPORTANT

questions are compulsory
h question carries 2 marks
te the appropriate option in the box provided box.

ary aim of educational psychology is

ontribute to an understanding of sound
ational practices.
rovide the academic background
ntial for effective teaching.
rovide a theoretical framework for
ational research.
rovide the teacher with a greater
eciation of his role in the education of the child.

☒ A

ifference between classical conditioning and operant conditioning is:

ical conditioning is based on consequences of an event while operant
tioning is based on repeated pairings of two events.
cal conditioning is based on repeated pairings of two events while operant
tioning is based on the consequences of an event.
her or not the infant likes the reward.
ical conditioning uses motor behavior but operant conditioning uses any
ior.

☒ B.

s more stress to the philosophy of social constructivism?

B. Kohlberg C. Vygotsky D. Dewey

☒ C.
